

***Claims***

What is claimed is:

1. An infant swing, comprising:
  - a support frame;
  - a swing arm extending downwardly from, and pivotably coupled to, said support frame;
  - a seat coupled to said swing arm; and
  - a flexible fabric shield coupled to said swing arm, extending downwardly toward said seat, and disposed to prevent an infant occupant of said seat from extending its arm beyond said swing arm.
2. The infant swing of claim 1, wherein the seat is configured to move between an expanded configuration and a collapsed configuration, the flexible fabric shield being taut when the seat is in the expanded configuration.
3. The infant swing of claim 1, wherein said support frame is configured to move between a collapsed configuration and an expanded configuration.
4. A collapsible infant swing, comprising:
  - a support frame reconfigurable between a first, use position and a second, storage position;
  - a swing arm pivotably coupled to said support frame; and
  - a seat coupled to said swing arm and having a foot portion and a back portion, the foot portion and the back portion each being pivotably coupled to said swing arm such that said seat is movable between a first, use position and a second, storage position, the foot portion and the back portion being approximately parallel in the storage position.

5. The infant support of claim 4, said support frame including a first portion and a second portion pivotably coupled to said first portion, wherein said first portion is angularly spaced from said second portion in said use position and said first portion is adjacent said second portion in said storage position.
6. The infant support of claim 4, further comprising a shield coupled to said swing arm between said seat and said support frame.
7. An infant swing, comprising:
  - a first frame portion;
  - a second frame portion pivotably coupled to said first frame portion, said first frame portion and said second frame portion being reconfigurable between a first position in which said second frame portion is angularly spaced from said first frame portion and a second position in which said first frame portion is adjacent said second frame portion;
  - a cross member coupled to at least said first frame portion;
  - first and second swing arms, each said swing arm having a first end and a second end, each of said second ends of said swing arms being pivotably coupled to said cross member and extending downwardly from said first frame portion when in said first position; and
  - a seat coupled to said first ends of said swing arms, said seat being reconfigurable between a use position and a storage position.
8. The infant swing of claim 7, further comprising a shield coupled to said swing arm between said seat and said first frame portion.
9. The infant swing of claim 7, further comprising:
  - selectively actuatable output including at least one of lights and sounds.

10. An infant swing, comprising:
  - a support frame;
  - a swing arm extending downwardly from and pivotably coupled to said support frame;
  - a seat coupled to said swing arm; and
  - a cross member coupled to said support frame, said cross member defining a recess along its length, said recess configured to be a handle.
11. The infant swing of claim 10, wherein said cross member further includes
  - a light; and
  - a switch configured to actuate the light.
